PATENT

AUG 0 8 2006

Application # 10/622,259

Attorney Docket # 2002P20760US01 (1009-029)

- 23. (Original) The method of claim 14, further comprising encrypting communications between the user interface device and the PLC.
- 24. (Original) The method of claim 14, further comprising encrypting communications between the programmable cable and the PLC.
- 25. (Original) The method of claim 14, further comprising encrypting communications between the programmable cable and the user interface device.
- 26. (Currently Amended) A method comprising the activities of:

providing a programmable cable comprising a first end connectable to a network and a second end connectable to a network communications device, a user interface device couplable to a network comprising the programmable cable, a <u>programmable logic controller (PLC)</u>, and the network communications device; and

automatically communicating from the programmable cable to the network communications device a PIN number and at least one of a plurality of configuration parameters comprising a PIN number.

- 27. (Original) The method of claim 26, further comprising initializing the programmable cable using the user interface device through the network by setting at least one of a plurality of configuration parameters further comprising: a mode of operation, a PPI protocol, a cable locality mode, a data transfer speed, and a communication language.
- 28. (Original) The method of claim 26, wherein the configuration parameters communicated to the network communications device further comprise a network communications device setup string.
- 29. (Original) The method of claim 26, further comprising monitoring data traffic through the programmable cable using a set of status indicators.
